How Airliners Fly Julien Evans 2018-10-23 If you are one of the millions of airline passengers who take to the air daily and have no idea how an aeroplane flies or how it is flown - but would like to find out - then this is the book for you. It is written by an airline pilot who knows from first-hand experience those questions that are asked most frequently. He knows that for many it is an interest born of curiosity, and in some cases, caused by fear. In this revised third edition Julien Evans explains, in straightforward everyday language, about the airframe and the engines, the flight deck and the controls, how the aeroplane is flown and the routines followed. In fact it explains everything the average passenger may wish to know. 'balanced, informative, comprehensive, totally accurate and , most importantly, interesting'.Pilot Magazine.

AIR CRASH INVESTIGATIONS: DEADLY MISTAKES The Crash of Air

China Flight 129 George Cramoisi, editor 2012-04 On April 15, 2002, Air China flight 129, a Boeing 767-200ER, operated by Air China, en route from Beijing, China to Busan, Korea, crashed on Mt. Dotdae, near Gimhae Airport, Busan. Of the 166 persons on board, 37 persons survived the crash, while 129 occupants were killed. The Korean Aviation Accident Investigation Board (KAAIB) determined that the probable cause of the crash was pilot error due to poor crew resource management and lost situational awareness during the circling approach of the runway. The Chinese investigation team pointed out that the Korean ATC was not fully licensed and mistakenly directed the airliner to descend to a wrong altitude and that the airport did not inform the crew of the weather conditions at the time. A contributing factor was that the airline made all announcements in Chinese and English, while most passengers were Korean.
