World of Water James Lovegrove 2016-03-22 WORLD OF WATER! Dev Harmer, reluctant agent of Interstellar Security Solutions, has travelled to ocean-world Robinson D, nicknamed Triton. Here, settlements of the Terran Diaspora have been coming under attack by members of the planet's native sub-aquatic race. ISS suspects the involvement of an agent provocateur working for humankind's galactic rivals, the artificial intelligence civilisation known as Polis+. As the violence escalates, Dev finds himself battling to restore order - but he has only seventy-two hours before his genetically engineered host form breaks down irreversibly. And all as an ancient god-beast rises from the depths to usher in a long foretold apocalypse... "The story zooms along at a rip-roaring pace, told in an irreverent tone that perfectly matches the character of our hero. Planet Alighieri is rendered in such believable detail that I almost got a sweat on when Harmer got into trouble on the surface. Lovegrove has got things off

to a brilliant start here."– SF Crow's Nest "I read this on holiday and it was perfect for kicking back, a throwback to the likes of Dumarest and James Bond. ****"– Theaker's Quarterly

Qualia and Mental Causation in a Physical World Terence Horgan 2015-03-05 How does mind fit into nature? Philosophy has long been concerned with this question. No contemporary philosopher has done more to clarify it than Jaegwon Kim, a distinguished analytic philosopher specializing in metaphysics and philosophy of mind. With new contributions from an outstanding line-up of eminent scholars, this volume focuses on issues raised in Kim's work. The chapters cluster

around two themes: first, exclusion, supervenience, and reduction, with attention to the causal exclusion argument for which Kim is widely celebrated; and second, phenomenal consciousness and qualia, with attention to the prospects for a functionalist account of the mental. This volume is sure to become a major focus of attention and research in the disciplines of metaphysics and philosophy of mind.

Negotiating International Water Rights Muserref Yetim 2016-06-28 Transboundary watercourses account for an estimated 60 per cent of global freshwater flow and support the livelihoods of hundreds of millions of people worldwide. Yet the indeterminate status of water rights in many international watercourses presents a problem and many attempts to resolve water rights issue have failed. Knowing how and where negotiations fail is essential if successful resolution is to be achieved. Muserref Yetim's important book seeks to illustrate a means to the peaceful resolution of natural resource based conflicts. Through a detailed study of the Tigris-Euphrates water conflict, involving Turkey, Syria and Iraq, countries of vital security interest to the world at large, the author clarifies the collective action dilemmas confronting Middle Eastern watercourses and reveals the bargaining bottlenecks where negotiations fail. She develops an original framework that explains bargaining failures and proposes conditions for creating a new property rights regime among watercourse states that offers a route to governing their shared water resources in ways that are politically, economically and environmentally sound. In almost all water scarce regions, international water resources are subject to intense unilateral exploitation in a highly competitive fashion. And as demand for freshwater continues to increase, through increasing urbanization and the continuing development of societies, so the issue of how such shared water resources can best be governed is becoming vitally important. *Negotiating International Water Rights* offers both a timely contribution to a matter of international concern and important insights into resource conflict in countries of vital security interest to the world at large.

The United Nations World Water Development Report 3 World Water Assessment Programme, 2012-05-23 The United Nations World Water Development Report, published every three years, is a comprehensive review providing an authoritative picture of the state of the world's freshwater resources. It offers best practices as well as in-depth theoretical analyses to help stimulate ideas and actions for better stewardship in the water sector. It is the only report of its kind, resulting from the collaboration and contributions of the 26 UN agencies, commissions, program, funds, secretariats and conventions that have a significant role in addressing global water concerns. The news media are full of talk of crises - in climate change, energy and food and troubled financial markets. These crises are linked to each other and to water resources management. Unresolved, they may lead to increasing political insecurity and conflict. Water is required to meet our fundamental needs and rising living standards and to sustain our planets fragile ecosystems. Pressures on the resource come from a growing and mobile population,

social and cultural change, economic development and technological change. Adding complexity and risk is climate change, with impacts on the resource as well as on the sources of pressure on water. The challenges, though substantial, are not insurmountable. The Report shows how some countries have responded. Progress in providing drinking water is heartening, with the Millennium Development Goal target on track in most regions. But other areas remain unaddressed, and after decades of inaction, the problems in water systems are enormous and will worsen if left unattended. Leaders in the water sector can inform decisions outside their domain and manage water resources to achieve agreed socioeconomic objectives and environmental integrity. Leaders in government, the private sector and civil society determine these objectives and allocate human and financial resources to meet them. Recognizing this responsibility, they must act now! Two volume set: 336 + 96 pages (case studies). Includes CD-ROM. Published jointly with UNESCO Publishing.
