**Seeing the Better City** Charles R. Wolfe 2017-02-02 In order to understand and improve cities today, personal observation remains as important as ever. While big data, digital mapping, and simulated cityscapes are valuable tools for understanding urban space, using them without on-the-ground, human impressions risks creating places that do not reflect authentic local context. Seeing the Better City brings our attention back to the real world right in front of us, focusing it once more on the sights, sounds, and experiences of place in order to craft policies, plans, and regulations to shape better urban environments. Through clear prose and vibrant photographs, Charles Wolfe shows those who experience cities how they might catalog the influences of urban form, neighborhood dynamics, public transportation, and myriad other basic city elements that impact their daily lives. He then shares insights into how they can use those observations to contribute to better planning and design decisions. Wolfe calls this the "urban diary" approach, and highlights how the perspective of the observer is key to understanding the dynamics of urban space. He concludes by offering contemporary examples and guidance on how to use carefully recorded and organized observations as a tool to create change in urban planning conversations and practice. From city-dwellers to elected officials involved in local planning and design issues, this book is an invaluable tool for constructive, creative discourse about improving urban space.

*Architect's Guide to Feng Shui* Cate Bramble 2007-06-01 Cate Bramble has devoted her career to highlighting the differences between 'feng shui-lite' as a fashionable pursuit in contrast to the original intentions of the Chinese masters. Here she presents the authentic principles in a technical, no-nonsense pocket book specifically for architects. As clients become more demanding and the competition for projects heats up, the architect is well advised to have many strings to their bow. This practical guide includes line illustrations that present the principles of feng shui, the Chinese art or practice in which a structure or site is chosen or configured so as to harmonize with the spiritual forces that inhabit it, and their application in architecture through planning principles, services, building elements and materials, in an accessible, easy

reference format. The feng shui-savvy architect can also benefit from feng shui's ability to match structures and land, and the peculiar capacity of authentic feng shui to forecast development-related concerns including cost overruns, quality issues - even worker injuries and trade disputes! The author explains feng shui from archaeological sources and evidence of practice in the east, contrasting it with what passes for feng shui in the west. She analyses the practice in terms of such concepts as western systems theory, viewshed, space syntax and the 'pattern landscape' theory of urban planning. For the first time, the Sustainable implications of feng shui design are explained with reference to the latest developments in behavioural and cognitive sciences, evolutionary biology and other western viewpoints.

*Handbook of Environmental Psychology and Quality of Life Research* Ghazlane Fleury-Bahi 2016-08-12 This Handbook presents a broad overview of the current research carried out in environmental psychology which puts into perspective quality of life and relationships with living spaces, and shows how this original analytical framework can be used to understand different environmental and societal issues. Adopting an original approach, this Handbook focuses on the links with other specialties in psychology, especially social and health psychology, together with other disciplines such as geography, architecture, sociology, anthropology, urbanism and engineering. Faced with the problems of society which involve the quality of life

of individuals and communities, it is fundamental to consider the relationships an individual has with his different living spaces. This issue of the links between quality of life and environment is becoming increasingly significant with, at a local level, problems resulting from different types of annoyances, such as pollution and noise, while, at a global level, there is the central question of climate change with its harmful consequences for humans and the planet. How can the impact on well-being of environmental nuisances and threats (for example, natural risks, pollution, and noise) be reduced? How can the quality of life within daily living spaces (home, cities, work environments) be improved? Why is it important to understand the psychological issues of our relationship with the global environment (climatic warming, ecological behaviours)? This Handbook is intended not only for students of various disciplines (geography, architecture, psychology, town planning, etc.) but also for social decision-makers and players who will find in it both theoretical and methodological perspectives, so that psychological and environmental dimensions can be better taken into account in their working practices.

**The “People Power” Health Superbook: Book 28. Canadian Medical Guide (Covers Most Topics Including Mental Health)** Tony Kelbrat 2014-04-05 This book is an extensive listing of websites, phone numbers, addresses and organizations for most entities within the medical and mental health realms throughout Canada including the territories. We're all afraid of getting sick and dying which is why we want our public health care system because we know no matter what happens in our lives, our medical needs will be taken care of but there is a problem, namely that a fully funded public healthcare system without allowance for private, for-profit healthcare providers like they have in Britain, strains the system. Common sense says a two-tiered system is best: Public where everything is free. Private, if you don't want to deal with the public system and want faster service, you pay for it through private clinics.

**Empowering Municipal Sustainability** Alexandra Reed Lajoux 2021-11-08 Amidst growing awareness over the past half century that human activity threatens our natural environment, many of the world's largest cities have played a role in the sustainability movement, as seen by such initiatives as Day of Cities sponsored by the United Nations. And now local governments in towns and smaller cities are beginning to play a more prominent role in the green movement. This book, inspired by the author's own experience as a citizen activist and local candidate, is a guide for local governments and citizens wishing to launch sustainability campaigns and programs that make a lasting difference in our world. Alexandra Reed Lajoux addresses the popular "green city" topic but focuses on smaller municipalities, which are more numerous than big cities, and in greater need of guidance. With a visionary foreword by Ben G. Price, National Organizer, Community Environmental Legal Defense Fund and author of *How Wealth Rules the World*, the book discusses the most critical environmental, economic, and engineering realities of municipal life and leadership in our times, ranging from rights of nature, to rollback tax rates, to green infrastructure, to gentrification. It will appeal to a broad range of town or city government employees and elected officials, as well as local activists, contemplating the issues of managing and funding sustainability that all localities worldwide face at some level.

**The Routledge Handbook of Placemaking** Cara Courage 2020-12-31 This Handbook is the first to explore the emergent field of 'placemaking' in terms of the recent research, teaching and learning, and practice agenda for the next few years. Offering valuable theoretical and practical insights from the leading scholars and practitioners in the field, it provides cutting-edge interdisciplinary research on the placemaking sector. Placemaking has seen a paradigmatic shift in urban design, planning, and policy to engage the community voice. This Handbook examines the development of placemaking, its emerging theories, and its future directions. The book is structured in seven distinct sections curated by experts in the areas concerned. Section One provides a glimpse at the history and key theories of placemaking and its interpretations by different community sectors. Section Two studies the transformative potential of placemaking practice through case studies on different places, methodologies, and theoretical frameworks. It also reveals placemaking's potential to nurture a holistic community engagement, social justice, and human-centric urban environments. Section Three looks at the politics of placemaking to consider who is included and who is excluded from its practice and if the concept of placemaking needs to be reconstructed. Section Four deals with the scales and scopes of art-based placemaking, moving from the city to the neighborhood and further to the individual practice. It juxtaposes the voice of the practitioner and professional alongside that of the

researcher and academic. Section Five tackles the socio-economic and environmental placemaking issues deemed pertinent to emerge more sustainable placemaking practices. Section Six emphasizes placemaking's intersection with urban design and planning sectors and includes case studies of generative planning practice. The final seventh section draws on the expertise of placemakers, researchers, and evaluators to present the key questions today, new methods and approaches to evaluation of placemaking in related fields, and notions for the future of evaluation practices. Each section opens with an introduction to help the reader navigate the text. This organization of the book considers the sectors that operate alongside the core placemaking practice. This seminal Handbook offers a timely contribution and international perspectives for the growing field of placemaking. It will be of interest to academics and students of placemaking, urban design, urban planning and policy, architecture, geography, cultural studies, and the arts.

**The Zeon Files** Mark C. Childs 2016-05-15 In the mid-twentieth century Eddie's Inferno Cocktail Lounge, Bunny Bread, Paris Shoe Shop, and many other businesses throughout New Mexico and the Southwest displayed eye-catching roadside signs created by the Zeon Corporation. These works of commercial art featured unique designs, irregular shapes, dynamic compositions, and neon light. The legendary fiesta dancer at the Albuquerque Terrace drive-in theater, for example, was well-known for the grace of its lines, its enormous size, and its flashing neon skirt. Created during a time before the simplified icons of major chains, many of these culturally significant artworks no longer exist. The Zeon Files rescues these historic artifacts from obscurity, presenting a collection of the working drawings of historic Route 66-era signs. In addition to presenting a visually rich archive, the authors discuss the working methods of design and construction and the craft of drafting techniques during this innovative era of American sign making.

Preservation Education Barry L. Stiefel 2014-09-02 Over the past twenty years, there has been a fundamental shift in the institutional organization of historic preservation education. Historic preservation is the most recent arrival in the collection of built environment disciplines and therefore lacks the pedagogical depth and breadth found in allied endeavors such as architecture and planning. As the first degree programs in preservation only date to the 1970s and the first doctoral programs to the 1990s, new faculty are confronted with pedagogical challenges that are unique to this relatively nascent field. Based on a conference that included educators from around the world, Barry L. Stiefel and Jeremy C. Wells now present a collection that seeks to address fundamental issues of preservation pedagogy, outcome-based education and assessment, and global issues of authenticity and significance in historic preservation. The editors argue that the subject of the analysis has shifted from, "What is the best way to fix a historic building?" to, "What are the best ways for teaching people how to preserve historic properties (and why) according to the various standards that have been established?" This important reconsideration of the state of the field in historic preservation education will appeal to a broad audience across numerous disciplines.

Facing Segregation Molly W. Metzger 2018-11-19 Evidence for the negative effects of segregation and concentrated poverty in America's cities now exists in abundance; poor and underrepresented communities in segregated urban housing markets suffer diminished outcomes in education, economic mobility, political participation, and physical and psychological health. Though many of the aggravating factors underlying this inequity have persisted or even grown worse in recent decades, the level of energy and attention devoted to

them by local and national policymakers has ebbed significantly from that which inspired the landmark civil rights legislation of the 1960s. Marking 50 years since the passage of the Fair Housing and Civil Rights Acts, *Facing Segregation* both builds on and departs from two generations of scholarship on urban development and inequality. Authors provide historical context for patterns of segregation in the United States and present arguments for bold new policy actions ranging from local innovations to national initiatives. The volume refocuses attention on achievable solutions by providing not only an overview of this timely subject, but a roadmap forward as the twenty-first century assesses the successes and failures of the housing policies inherited from the twentieth. Rather than introducing new theories or empirical data sets describing the urban landscape, Metzger and Webber have gathered the field's first collection of prescriptions for what ought to be done.
