Electric Energy Conference 1985 1985 The electricity supply industry is one of the largest industries in Australia in terms of revenue, income, total assets, annual capital expenditure and number of employees. The success of every other industry in Australia depends on the efficient utilisation of the electric energy produced and distributed by the electricity supply industry. The theme of this conference 'Modern trends in the generation transmission, distribution and utilization of electric energy' has attracted numerous papers in these fields. It is hoped that this forum will provide the communication links required between engineers working in research and development and engineers working in the operational fields of electric power engineering.
